

Smart Contract Audit

FOR

FLOKI 2.0

DATED : 3 July 23'

FUNCTIONAL TESTING

Centralization – Trades are disabled by default

Severity: **High**

function: launch

Status: Not Resolved

Overview:

Owner must enable trades manually, otherwise holders wont be able to buy/sell/transfer tokens.

```
function launch() external onlyOwner {  
    require(startTradeBlock == 0, "already started");  
    startTradeBlock = block.number;  
}
```

Suggestion

Its suggested to either enable trades prior to presale, or transfer ownership of the contract to a trusted 3rd party like a certified pinksale safu developer.

AUDIT SUMMARY

Project name – FLOKI 2.0

Date: 3 July, 2023

Scope of Audit- Audit Ace was consulted to conduct the smart contract audit of the solidity source codes.

Audit Status: Passed with High Risk

Issues Found

USED TOOLS

Tools:

1- Manual Review:

A line by line code review has been performed by audit ace team.

2- BSC Test Network: All tests were conducted on the BSC Test network, and each test has a corresponding transaction attached to it. These tests can be found in the "Functional Tests" section of the report.

3- Slither :

The code has undergone static analysis using Slither.

Testnet version:

The tests were performed using the contract deployed on the BSC Testnet, which can be found at the following address:

<https://testnet.bscscan.com/token/0x91137ADC639155D869A337a3699CC729D0206FF1>

Token Information

Token Name : Floki 2.0

Token Symbol: FLOKI 2.0

Decimals: 18

Token Supply: 10,000,000

Token Address:

TOKEN OVERVIEW

Fees:

Buy Fees: 7%

Sell Fees: 7%

Transfer Fees: 0%

Fees Privilege: immutable fees

Ownership: Owned

Minting: none

Max Tx Amount/ Max Wallet Amount: No

Blacklist: No

Other Privileges: - Initial distribution of the tokens
- enabling trades

AUDIT METHODOLOGY

The auditing process will follow a routine as special considerations by Auditace:

- Review of the specifications, sources, and instructions provided to Auditace to make sure the contract logic meets the intentions of the client without exposing the user's funds to risk.
 - Manual review of the entire codebase by our experts, which is the process of reading source code line-by-line in an attempt to identify potential vulnerabilities.
 - Specification comparison is the process of checking whether the code does what the specifications, sources, and instructions provided to Auditace describe.
 - Test coverage analysis determines whether the test cases are covering the code and how much code is exercised when we run the test cases.
 - Symbolic execution is analysing a program to determine what inputs cause each part of a program to execute.
 - Reviewing the codebase to improve maintainability, security, and control based on the established industry and academic practices.

VULNERABILITY CHECKLIST

- | | |
|------------------------------------|-------------------------------|
| ✓ Return values of low-level calls | ✓ Gasless Send |
| ✓ Private modifier | ✓ Using block.timestamp |
| ✓ Multiple Sends | ✓ Re-entrancy |
| ✓ Using Suicide | ✓ Tautology or contradiction |
| ✓ Gas Limitand Loops | ✓ Timestamp Dependence |
| ✓ Address hardcoded | ✓ Revert/require functions |
| ✓ Exception Disorder | ✓ Use of tx.origin |
| ✓ Using inline assembly | ✓ Integer overflow/underflow |
| ✓ Divide before multiply | ✓ Dangerous strict equalities |
| ✓ Missing Zero Address Validation | ✓ Using SHA3 |
| ✓ Compiler version not fixed | ✓ Using throw |

CLASSIFICATION OF RISK

Severity

Description

◆ Critical

These vulnerabilities could be exploited easily and can lead to asset loss, data loss, asset, or data manipulation. They should be fixed right away.

◆ High-Risk

A vulnerability that affects the desired outcome when using a contract, or provides the opportunity to use a contract in an unintended way.

◆ Medium-Risk

A vulnerability that could affect the desired outcome of executing the contract in a specific scenario.

◆ Low-Risk

A vulnerability that does not have a significant impact on possible scenarios for the use of the contract and is probably subjective.

◆ Gas Optimization /Suggestion

A vulnerability that has an informational character but is not affecting any of the code.

INHERITANCE TREE

POINTS TO NOTE

- Owner is not able to change current fees (7% buy, 7% sell, 0% transfers)
 - Owner is not able to blacklist an arbitrary address.
 - Owner is not able to set max wallet/transfer/buy/sell
 - Owner is not able to mint new tokens
 - **Owner must enable trades manually**

FUNCTIONAL TESTING

Centralization – Trades are disabled by default

Severity: **High**

function: launch

Status: Not Resolved

Overview:

Owner must enable trades manually, otherwise holders wont be able to buy/sell/transfer tokens.

```
function launch() external onlyOwner {  
    require(startTradeBlock == 0, "already started");  
    startTradeBlock = block.number;

```

Suggestion

Its suggested to either enable trades prior to presale, or transfer ownership of the contract to a trusted 3rd party like a certified pinksale safu developer.

FUNCTIONAL TESTING

Logical – Lost funds

Severity: **Medium**

function: ----

Status: Not Resolved

Overview:

There are no functions to withdraw ERC20 tokens or BNB from the contract. All the tokens sent to the contract will be locked forever.

Suggestion

Its strongly suggested to implement two functions for withdrawing ERC20 tokens and BNB from the contract.
