FOR

## E-Launch

DATED : 24 Apr 23'

# AUDIT SUMMARY

---

**Project name – E-Launch**

**Date:** 24 April, 2023

**Scope of Audit-** Audit Ace was consulted to conduct the smart contract audit of the solidity source codes.

**Audit Status:** **Passed**

# USED TOOLS

---

## Tools:

### 1- Manual Review:

a line by line code review has been performed by audit ace team.

### 2- BSC Test Network:

all tests were done on BSC Test network, each test has its transaction has attached to it.

### 3- Slither : Static Analysis

**Testnet Link:** all tests were done using this contract, tests are done on BSC Testnet

# TOKEN OVERVIEW

---

## **Fees:**

Buy Fees: 8%

Sell Fees: 8%

Transfer Fees: 0%

---

**Fees Privilege:** Owner

---

**Ownership :** Owned

---

**Minting:** No mint function

---

**Max Tx Amount/ Max Wallet Amount:** No

---

**Blacklist:** Yes

---

**Other Privileges:** including and excluding form fee -  
changing swap threshold - modify fee

---

# AUDIT METHODOLOGY

---

The auditing process will follow a routine as special considerations by Auditace:

- Review of the specifications, sources, and instructions provided to Auditace to make sure the contract logic meets the intentions of the client without exposing the user's funds to risk.
  - Manual review of the entire codebase by our experts, which is the process of reading source code line-by-line in an attempt to identify potential vulnerabilities.
  - Specification comparison is the process of checking whether the code does what the specifications, sources, and instructions provided to Auditace describe.
  - Test coverage analysis determines whether the test cases are covering the code and how much code is exercised when we run the test cases.
  - Symbolic execution is analysing a program to determine what inputs cause each part of a program to execute.
  - Reviewing the codebase to improve maintainability, security, and control based on the established industry and academic practices.

# CLASSIFICATION OF RISK

## Severity

## Description

◆ Critical	These vulnerabilities could be exploited easily and can lead to asset loss, data loss, asset, or data manipulation. They should be fixed right away.
◆ High-Risk	A vulnerability that affects the desired outcome when using a contract, or provides the opportunity to use a contract in an unintended way.
◆ Medium-Risk	A vulnerability that could affect the desired outcome of executing the contract in a specific scenario.
◆ Low-Risk	A vulnerability that does not have a significant impact on possible scenarios for the use of the contract and is probably subjective.
◆ Gas Optimization / Suggestion	A vulnerability that has an informational character but is not affecting any of the code.

# INHERITANCE TREE

---

# POINTS TO NOTE

---

- Owner is able to set buy/sell fees more than 8% each
  - Owner is not able to set transfer taxes (0% forever)
  - Owner is not able to set max buy/sell/transfer/hold amount
  - Owner is not able to blacklist an arbitrary wallet
  - Owner is not able to disable trades
  - Owner is not able to mint new tokens
  - Owner must enable trading for holder manually

# MANUAL TESTING

## Centralization - Owner Must Enable Trades

**Severity:** High / Informational

**Function:** enableTradingEnabled

**Lines:** 1157

**Status:** Resolved (Safu dev enables trades)

### Overview:

The owner is required to enable trading for investors. If trading remains disabled, token holders will not have the ability to buy, sell, or transfer their tokens.

```
function EnableTradingEnabled() external onlyOwner {  
    require(!tradingEnabled, "Trading is already enabled");  
    tradingEnabled = true;  
    TradingBlock = block.number;  
}
```

### Recommendation:

While the presence of this function is considered a feature rather than a flaw, it is crucial to highlight the centralization risk it inherently poses. To address this issue and ensure the enablement of trades, one possible solution would be to transfer the contract's ownership to a trusted third party, such as a Pinksale Safu developer. This would help mitigate the centralization risk associated with this function.
