

Smart Contract Audit

FOR

Mario CEO

DATED : 02 May 23'

AUDIT SUMMARY

Project name – Mario CEO

Date: 02 May, 2023

Scope of Audit- Audit Ace was consulted to conduct the smart contract audit of the solidity source codes.

Audit Status: **Passed**

Issues Found

Status	Critical	High	Medium	Low	Suggestion
Open	0	0	0	0	0
Acknowledged	0	0	0	0	0
Resolved	0	0	0	0	0

USED TOOLS

Tools:

1- Manual Review:

a line by line code review has been performed by audit ace team.

2- Slither : Static Analysis

Note:

It is important to note that any issues or vulnerabilities identified during the audit are not the responsibility of the auditor, as the **MARIO** is already live and actively traded. The auditor's role is limited to providing an independent evaluation of the smart contract code, as provided by the token's development team, and identifying potential issues or areas for improvement.

Token Information

Token Name : Mario CEO

Token Symbol: MARIO

Decimals: 9

Token Supply:1,000,000,000,000,000,000

Token Address:

0xa750B38172C5f31863Fa88145cc45D52069d35e6

Checksum:

a57198f035f197a287e782cfefdb4f2dc22dd4ed

Owner:

0x00
(RENOUNCED)

Deployer:

0x9fa203d69FF88f0347f2357d2bA0c85A45aBe943

TOKEN OVERVIEW

Fees:

Buy Fees: 10 %

Sell Fees: 10 %

Transfer Fees: 10%

Fees Privilige: owner

Ownership : Owned

Minting: No mint function

Max Tx Amount/ Max Wallet Amount: No

Blacklist: No

Other Privileges: NONE

AUDIT METHODOLOGY

The auditing process will follow a routine as special considerations by Auditace:

- Review of the specifications, sources, and instructions provided to Auditace to make sure the contract logic meets the intentions of the client without exposing the user's funds to risk.
 - Manual review of the entire codebase by our experts, which is the process of reading source code line-by-line in an attempt to identify potential vulnerabilities.
 - Specification comparison is the process of checking whether the code does what the specifications, sources, and instructions provided to Auditace describe.
 - Test coverage analysis determines whether the test cases are covering the code and how much code is exercised when we run the test cases.
 - Symbolic execution is analysing a program to determine what inputs cause each part of a program to execute.
 - Reviewing the codebase to improve maintainability, security, and control based on the established industry and academic practices.
-

VULNERABILITY CHECKLIST

- | | |
|--|---|
|  Return values of low-level calls |  Gasless Send |
|  Private modifier |  Using block.timestamp |
|  Multiple Sends |  Re-entrancy |
|  Using Suicide |  Tautology or contradiction |
|  Gas Limitand Loops |  Timestamp Dependence |
|  Address hardcoded |  Revert/require functions |
|  Exception Disorder |  Use of tx.origin |
|  Using inline assembly |  Integer overflow/underflow |
|  Divide before multiply |  Dangerous strict equalities |
|  Missing Zero Address Validation |  Using SHA3 |
|  Compiler version not fixed |  Using throw |
-

CLASSIFICATION OF RISK

Severity

Description

◆ Critical

These vulnerabilities could be exploited easily and can lead to asset loss, data loss, asset, or data manipulation. They should be fixed right away.

◆ High-Risk

A vulnerability that affects the desired outcome when using a contract, or provides the opportunity to use a contract in an unintended way.

◆ Medium-Risk

A vulnerability that could affect the desired outcome of executing the contract in a specific scenario.

◆ Low-Risk

A vulnerability that does not have a significant impact on possible scenarios for the use of the contract and is probably subjective.

◆ Gas Optimization /Suggestion

A vulnerability that has an informational character but is not affecting any of the code.

INHERITANCE TREE

POINTS TO NOTE

- Ownership is renounced, meaning owner has not control over the contract functions
 - Owner is not able to modify buy/sell/transfer fees (10% for each)
 - Owner is not able to set max buy/sell/transfer/hold amount
 - Owner is not able to blacklist an arbitrary wallet
 - Owner is not able to disable trades
 - Owner is not able to mint new tokens
-

CONTRACT ASSESMENT

Contract	Type	Bases

STATIC ANALYSIS

```
Reentrancy in MARIOCEO.transferFrom(address,address,uint256) (contracts/Token.sol#667-682):
  External calls:
    - _transfer(sender,recipient,amount) (contracts/Token.sol#672)
    - _wallet.transfer(amount) (contracts/Token.sol#778)
  External calls sending eth:
    - _transfer(sender,recipient,amount) (contracts/Token.sol#672)
    - _wallet.transfer(amount) (contracts/Token.sol#778)
    - _uniswapV2Router.addLiquidityETH(value:BNBAmount)(address(this),tokenAmount,0,0,Wallet_Burn,block.timestamp) (contracts/Token.sol#826-833)
  State variables written after the call(s):
    - _approve(sender,_msgSender(),allowances[sender][_msgSender()].sub(amount,ERC20: transfer amount exceeds allowance)) (contracts/Token.sol#673-680)
    - _allowances[theOwner][theSpender] = amount (contracts/Token.sol#726)
  Event emitted after the call(s):
    - Approval(theOwner,theSpender,amount) (contracts/Token.sol#727)
    - _approve(sender,_msgSender(),allowances[sender][_msgSender()].sub(amount,ERC20: transfer amount exceeds allowance)) (contracts/Token.sol#673-680)
Reference: https://github.com/crytic/slither/wiki/Detector-Documentation#reentrancy-vulnerabilities-4

Variable IUniswapV2Router01.addLiquidity(address,address,uint256,uint256,uint256,uint256,address,uint256).amountADesired (contracts/Token.sol#353) is too similar to IUniswapV2Router01.addLiquidity(address,address,uint256,uint256,uint256,uint256,address,uint256).amountBDesired (contracts/Token.sol#354)
Variable MARIOCEO.swapAndLiquify(uint256).tokens_to_D (contracts/Token.sol#787) is too similar to MARIOCEO.swapAndLiquify(uint256).tokens_to_M (contracts/Token.sol#786)
Reference: https://github.com/crytic/slither/wiki/Detector-Documentation#variable-names-too-similar

MARIOCEO.slitherConstructorVariables() (contracts/Token.sol#541-881) uses literals with too many digits:
  - _tTotal = 1000000000000000 * 10 ** 2 * 10 ** 2 * 10 ** decimals (contracts/Token.sol#575-576)
Reference: https://github.com/crytic/slither/wiki/Detector-Documentation#too-many-digits

MARIOCEO.MAX (contracts/Token.sol#573) is never used in MARIOCEO (contracts/Token.sol#541-881)
MARIOCEO._previousMaxWalletToken (contracts/Token.sol#588) is never used in MARIOCEO (contracts/Token.sol#541-881)
MARIOCEO._previousMaxTxAmount (contracts/Token.sol#590) is never used in MARIOCEO (contracts/Token.sol#541-881)
Reference: https://github.com/crytic/slither/wiki/Detector-Documentation#unused-state-variable

MARIOCEO.Percent_AutoLP (contracts/Token.sol#586) should be constant
MARIOCEO.Percent_Burn (contracts/Token.sol#585) should be constant
MARIOCEO.Percent_Dev (contracts/Token.sol#584) should be constant
MARIOCEO.Percent_Marketing (contracts/Token.sol#583) should be constant
MARIOCEO.Wallet_Dev (contracts/Token.sol#569-570) should be constant
MARIOCEO.Wallet_Marketing (contracts/Token.sol#567-568) should be constant
MARIOCEO.Tax_On_Buy (contracts/Token.sol#581) should be constant
MARIOCEO.Tax_On_Sell (contracts/Token.sol#582) should be constant
MARIOCEO.swapAndLiquifyEnabled (contracts/Token.sol#594) should be constant
MARIOCEO.swapTrigger (contracts/Token.sol#580) should be constant
Reference: https://github.com/crytic/slither/wiki/Detector-Documentation#state-variables-that-could-be-declared-constant

MARIOCEO.maxTxAmount (contracts/Token.sol#589) should be immutable
MARIOCEO.maxWalletToken (contracts/Token.sol#587) should be immutable
MARIOCEO._previousMaxTxAmount (contracts/Token.sol#590) should be immutable
MARIOCEO._previousMaxWalletToken (contracts/Token.sol#588) should be immutable
MARIOCEO.uniswapV2Pair (contracts/Token.sol#592) should be immutable
MARIOCEO.uniswapV2Router (contracts/Token.sol#591) should be immutable
Reference: https://github.com/crytic/slither/wiki/Detector-Documentation#state-variables-that-could-be-declared-immutable
```

Result => A static analysis of contract's source code has been performed using slither,

No major issues were found in the output

FUNCTIONAL TESTING

As the token is already live and actively traded, with no apparent issues affecting its functionality or trading, we have determined that performing unit tests on the smart contract is not necessary for this audit. Our focus has been on reviewing the smart contract code and its compliance with the ERC20 standard, as well as identifying potential vulnerabilities and areas for improvement.

MANUAL TESTING

No Issues Found

ABOUT AUDITACE

We specialize in providing thorough and reliable audits for Web3 projects. With a team of experienced professionals, we use cutting-edge technology and rigorous methodologies to evaluate the security and integrity of blockchain systems. We are committed to helping our clients ensure the safety and transparency of their digital assets and transactions.
