

Smart Contract Audit

FOR

PEPE WITH PEARL EARRING

DATED : 15 October 23'

MANUAL TESTING

Logical – Setting swap threshold to zero may revert swaps on internal swap

Severity: High

function: updateSwapTokensAtAmount

Status: Acknowledged by owner

Alleviation:

We have no plans to change swap threshold using 'UpdateSwapToTokensAtAmount' in our project. As evidence of our commitment, we have implemented a 51% liquidation and a 49% buyback feature. Furthermore, the liquidation is locked for a period of 365 days.

we will also renounce ownership of the contract after its launch.

Overview:

Setting swapTokensAtAmount to zero may revert sell (PEPEEARL => BNB) or wallet to wallet transfers. This is because contract will try to perform internal swap with 0 tokens as input.

```
function updateSwapTokensAtAmount(uint256 amount) external onlyOwner {
    require(
        amount <= 1000000,
        "Cannot set swap threshold amount higher than 1% of tokens"
    );
    swapTokensAtAmount = amount * 10 ** _decimals;
}
```

Suggestion

Ensure that swapTokensAtAmount is always greater than zero

```
function updateSwapTokensAtAmount(uint256 amount) external onlyOwner {
    require(
        amount <= 1000000,
        "Cannot set swap threshold amount higher than 1% of tokens"
    );
    require(amount >= totalSupply() / 100000 * 10 ** _decimals(), "new swap threshold must be higher than 0.00001% of total supply");
    swapTokensAtAmount = amount * 10 ** _decimals;
}
```

Alternatively, you can use a try-catch block when calling pancake swap router try

```
router.swapExactTokensForETHSupportingFeeOnTransferTokens(
    tokenAmount,
    0, // accept any amount of ETH
    path,
    address(this),
    block.timestamp
)
{} catch {}
```

AUDIT SUMMARY

Project name – PEPE WITH PEARL EARRING

Date: 15 October 2023

Scope of Audit- Audit Ace was consulted to conduct the smart contract audit of the solidity source codes.

Audit Status: Passed

Issues Found

Status	Critical	High	Medium	Low	Suggestion
Open	0	0	0	0	0
Acknowledged	0	1	0	0	0
Resolved	0	1	0	0	0

USED TOOLS

Tools:

1- Manual Review:

A line by line code review has been performed by audit ace team.

2- BSC Test Network: All tests were conducted on the BSC Test network, and each test has a corresponding transaction attached to it. These tests can be found in the "Functional Tests" section of the report.

3- Slither :

The code has undergone static analysis using Slither.

Testnet version:

The tests were performed using the contract deployed on the BSC Testnet, which can be found at the following address:

<https://testnet.bscscan.com/token/0xFfD18E092508C01B5D07db8a23F31A3eD4E91469>

Token Information

Token Address :

0xCf3eD1d49134fB015bd4b919Cd7ae41Dda0581D9

Name: PEPE WITH PEARL EARRING

Symbol: PEPEARL

Decimals: 9

Network: Binance smart chain

Token Type: BEP20

Owner: 0x1b7963FdD0f57ED7A12570d4B260d19401A3e9B4

Deployer: 0x1b7963FdD0f57ED7A12570d4B260d19401A3e9B4

Token Supply: 100,000,000

Checksum:

51599f7ac46156632bb42ac8e11439bbf74cc982

Testnet version:

The tests were performed using the contract deployed on the BSC Testnet, which can be found at the following address:
<https://testnet.bscscan.com/token/0xFfD18E092508C01B5D07db8a23F31A3eD4E91469>

TOKEN OVERVIEW

buy fee: 3%

Sell fee: 3%

transfer fee: 3%

Fee Privilege: Static fees

Ownership: Owner

Minting: None

Max Tx: None

Blacklist: No

Other Privileges:

- Initial distribution of the token
 - Modyfing internal swap thershold
-

AUDIT METHODOLOGY

The auditing process will follow a routine as special considerations by Auditace:

- Review of the specifications, sources, and instructions provided to Auditace to make sure the contract logic meets the intentions of the client without exposing the user's funds to risk.
 - Manual review of the entire codebase by our experts, which is the process of reading source code line-by-line in an attempt to identify potential vulnerabilities.
 - Specification comparison is the process of checking whether the code does what the specifications, sources, and instructions provided to Auditace describe.
 - Test coverage analysis determines whether the test cases are covering the code and how much code is exercised when we run the test cases.
 - Symbolic execution is analysing a program to determine what inputs cause each part of a program to execute.
 - Reviewing the codebase to improve maintainability, security, and control based on the established industry and academic practices.
-

VULNERABILITY CHECKLIST

- | | |
|------------------------------------|-------------------------------|
| ✓ Return values of low-level calls | ✓ Gasless Send |
| ✓ Private modifier | ✓ Using block.timestamp |
| ✓ Multiple Sends | ✓ Re-entrancy |
| ✓ Using Suicide | ✓ Tautology or contradiction |
| ✓ Gas Limitand Loops | ✓ Timestamp Dependence |
| ✓ Address hardcoded | ✓ Revert/require functions |
| ✓ Exception Disorder | ✓ Use of tx.origin |
| ✓ Using inline assembly | ✓ Integer overflow/underflow |
| ✓ Divide before multiply | ✓ Dangerous strict equalities |
| ✓ Missing Zero Address Validation | ✓ Using SHA3 |
| ✓ Compiler version not fixed | ✓ Using throw |
-

CLASSIFICATION OF RISK

Severity

Description

◆ Critical	These vulnerabilities could be exploited easily and can lead to asset loss, data loss, asset, or data manipulation. They should be fixed right away.
◆ High-Risk	A vulnerability that affects the desired outcome when using a contract, or provides the opportunity to use a contract in an unintended way.
◆ Medium-Risk	A vulnerability that could affect the desired outcome of executing the contract in a specific scenario.
◆ Low-Risk	A vulnerability that does not have a significant impact on possible scenarios for the use of the contract and is probably subjective.
◆ Gas Optimization / Suggestion	A vulnerability that has an informational character but is not affecting any of the code.

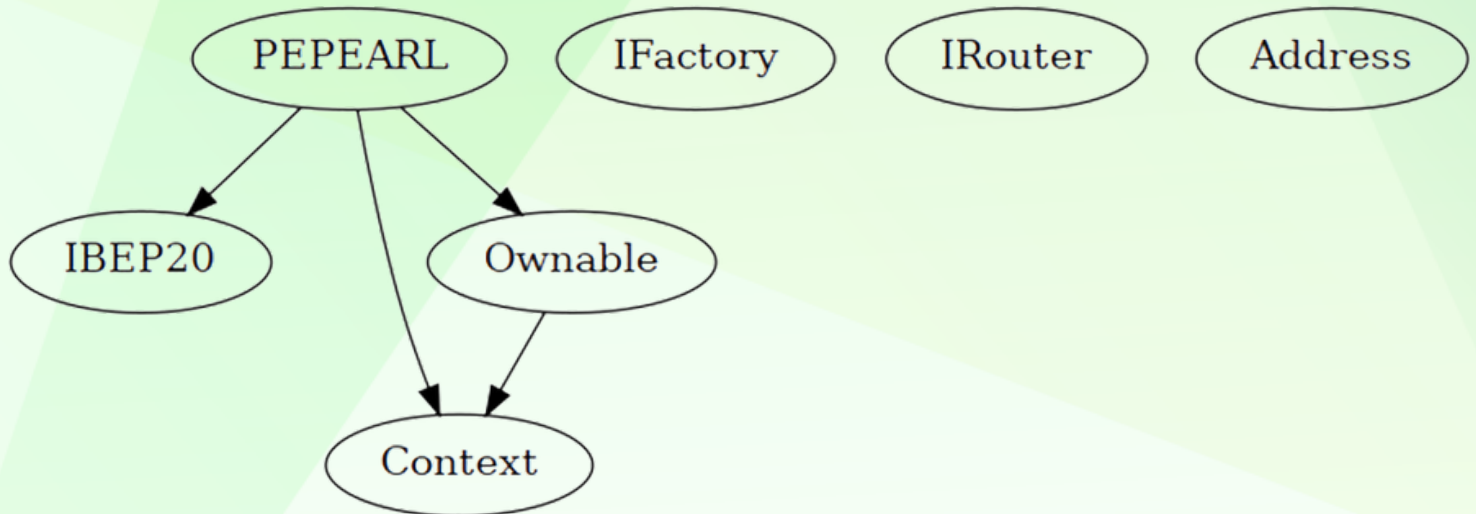

Findings

Severity

Found

◆ Critical	0
◆ High-Risk	2
◆ Medium-Risk	0
◆ Low-Risk	0
◆ Gas Optimization / Suggestions	0

INHERITANCE TREE

POINTS TO NOTE

- **Owner is not able to adjust buy/sell/transfer fees (3% each)**
 - Owner is not able to blacklist an arbitrary wallet
 - Owner is not able to disable trades
 - Owner is not able to mint new tokens
 - **Owner must enable trades manually (trades already enabled)**
-

FUNCTIONAL TESTING

1- Adding liquidity (**passed**):

<https://testnet.bscscan.com/tx/0x9305d649c7949ba7929c1779cf4bedb75034206b304ff16c9aa5d06c65eda9c1>

2- Buying when excluded (0% tax) (**passed**):

<https://testnet.bscscan.com/tx/0xb8f326c8a2a8308f357f65f27a27c68016efce795d15fc4576d2287c8f34ed4c>

3- Selling when excluded (0% tax) (**passed**):

<https://testnet.bscscan.com/tx/0x5fbe6dbd35e6150dd1a1f806ff3cd1a4e54448d411e24986cad2e0679456f834>

4- Transferring when excluded from fees (0% tax) (**passed**):

<https://testnet.bscscan.com/tx/0x3ccbeac1d1cf7a71c26dc60eb6bfe68d1acf30383d729bf68d2d543027ce0d60>

5- Buying when not excluded from fees (tax 3%) (**passed**):

<https://testnet.bscscan.com/tx/0xd2111707cc0ca38c406c2760ba181087b59c7720e2fac918c83bcf5553f53a89>

6- Selling when not excluded from fees (tax 3%) (**passed**):

<https://testnet.bscscan.com/tx/0x8222d051dc3f6c274aa1b32b23555a832ef0614f74fb2f9c90fe37fc39fcb80>

7- Transferring when not excluded from fees (3% tax) (**passed**):

<https://testnet.bscscan.com/tx/0xd81b5762e897070d139fc0ac484b0061c996066cf940fc3c5051ef45d9c179de>

7- Internal swap (Marketing BNB) (**passed**):

<https://testnet.bscscan.com/tx/0xd81b5762e897070d139fc0ac484b0061c996066cf940fc3c5051ef45d9c179de>

MANUAL TESTING

Centralization – Enabling Trades

Severity: High

function: EnableTrading

Status: Resolved (Already enabled trades)

Overview:

The **enableTrading** function permits only the contract owner to activate trading capabilities. Until this function is executed, no investors can buy, sell, or transfer their tokens. This places a high degree of control and centralization in the hands of the contract owner.

```
function EnableTrading() external onlyOwner {  
    require(!tradingEnabled, "Cannot re-enable trading");  
    tradingEnabled = true;  
    swapEnabled = true;  
    genesis_block = block.number;  
}
```

Suggestion

To reduce centralization and potential manipulation, consider one of the following approaches:

1. Automatically enable trading after a specified condition, such as the completion of a presale, is met.
 2. If manual activation is still desired, consider transferring the ownership of the contract to a trustworthy, third-party entity like a certified "PinkSale Safu" developer. This can provide investors with more confidence in the eventual activation of trading capabilities, mitigating concerns of potential bad faith actions by the original owner
-

MANUAL TESTING

Logical – Setting swap threshold to zero may revert swaps on internal swap

Severity: High

function: updateSwapTokensAtAmount

Status: Acknowledged by owner

Alleviation:

We have no plans to change swap threshold using 'UpdateSwapToTokensAtAmount' in our project. As evidence of our commitment, we have implemented a 51% liquidation and a 49% buyback feature. Furthermore, the liquidation is locked for a period of 365 days.

we will also renounce ownership of the contract after its launch.

Overview:

Setting swapTokensAtAmount to zero may revert sell (PEPEEARL => BNB) or wallet to wallet transfers. This is because contract will try to perform internal swap with 0 tokens as input.

```
function updateSwapTokensAtAmount(uint256 amount) external onlyOwner {
    require(
        amount <= 1000000,
        "Cannot set swap threshold amount higher than 1% of tokens"
    );
    swapTokensAtAmount = amount * 10 ** _decimals;
}
```

Suggestion

Ensure that swapTokensAtAmount is always greater than zero

```
function updateSwapTokensAtAmount(uint256 amount) external onlyOwner {
    require(
        amount <= 1000000,
        "Cannot set swap threshold amount higher than 1% of tokens"
    );
    require(amount >= totalSupply() / 100000 * 10 ** _decimals(), "new swap threshold must be higher than 0.00001% of total supply");
    swapTokensAtAmount = amount * 10 ** _decimals;
}
```

Alternatively, you can use a try-catch block when calling pancake swap router

```
try
    router.swapExactTokensForETHSupportingFeeOnTransferTokens(
        tokenAmount,
        0, // accept any amount of ETH
        path,
        address(this),
        block.timestamp
    )
    {} catch {}
```
