

Smart Contract Audit

FOR
PLP

DATED : 26 MAY 23'

AUDIT SUMMARY

Project name – PLP

Date: 26 May, 2023

Scope of Audit- Audit Ace was consulted to conduct the smart contract audit of the solidity source codes.

Audit Status: **Passed**

Issues Found

Status	Critical	High	Medium	Low	Suggestion
Open	0	0	0	0	0
Acknowledged	0	0	0	0	0
Resolved	0	0	0	0	0

USED TOOLS

Tools:

1. Manual Review: The code has undergone a line-by-line review by the **Ace** team.

2. ETH Test Network: All tests were conducted on the ETH Test network, and each test has a corresponding transaction attached to it. These tests can be found in the "Functional Tests" section of the report.

3. Slither: The code has undergone static analysis using Slither.

Testnet version:

The tests were performed using the contract deployed on the BSC Testnet, which can be found at the following address:

<https://testnet.bscscan.com/token/0x397488A4EcdEBc2669e9BbEd45FF18562e203063>

Token Information

Name : Pepe Le Pew

Symbol : PLP

Decimals: 18

Network: BSC

Token Type: BEP20

Token Address:

0x400D7F6d80d50fA4D1b9051496582e26CA4F7A64

Owner: --- (at time of writing the audit)

Deployer: 0x8b8cEd2cEb09bC778c18D64C3A5E971F
03B1D3dA

Token Information

Fees:

Buy Fees: 0%

Sell Fees: 0%

Transfer Fees: 0%

Fees Privilege: No fees

Ownership : Not owned

Minting: None

Max Tx Amount/ Max Wallet Amount: No

Blacklist: No

Other Privileges:- Initial distribution of the tokens

AUDIT METHODOLOGY

The auditing process will follow a routine as special considerations by Auditace:

- Review of the specifications, sources, and instructions provided to Auditace to make sure the contract logic meets the intentions of the client without exposing the user's funds to risk.
 - Manual review of the entire codebase by our experts, which is the process of reading source code line-by-line in an attempt to identify potential vulnerabilities.
 - Specification comparison is the process of checking whether the code does what the specifications, sources, and instructions provided to Auditace describe.
 - Test coverage analysis determines whether the test cases are covering the code and how much code is exercised when we run the test cases.
 - Symbolic execution is analysing a program to determine what inputs cause each part of a program to execute.
 - Reviewing the codebase to improve maintainability, security, and control based on the established industry and academic practices.
-

VULNERABILITY CHECKLIST

- | | |
|------------------------------------|-------------------------------|
| ✓ Return values of low-level calls | ✓ Gasless Send |
| ✓ Private modifier | ✓ Using block.timestamp |
| ✓ Multiple Sends | ✓ Re-entrancy |
| ✓ Using Suicide | ✓ Tautology or contradiction |
| ✓ Gas Limitand Loops | ✓ Timestamp Dependence |
| ✓ Address hardcoded | ✓ Revert/require functions |
| ✓ Exception Disorder | ✓ Use of tx.origin |
| ✓ Using inline assembly | ✓ Integer overflow/underflow |
| ✓ Divide before multiply | ✓ Dangerous strict equalities |
| ✓ Missing Zero Address Validation | ✓ Using SHA3 |
| ✓ Compiler version not fixed | ✓ Using throw |
-

CLASSIFICATION OF RISK

Severity

Description

◆ Critical

These vulnerabilities could be exploited easily and can lead to asset loss, data loss, asset, or data manipulation. They should be fixed right away.

◆ High-Risk

A vulnerability that affects the desired outcome when using a contract, or provides the opportunity to use a contract in an unintended way.

◆ Medium-Risk

A vulnerability that could affect the desired outcome of executing the contract in a specific scenario.

◆ Low-Risk

A vulnerability that does not have a significant impact on possible scenarios for the use of the contract and is probably subjective.

◆ Gas Optimization /Suggestion

A vulnerability that has an informational character but is not affecting any of the code.

Findings

Severity

Found

INHERITANCE TREE

POINTS TO NOTE

- Fees are 0 (static)
 - Token is not owned by any wallet
 - PLP is a simple ERC20 token with no additional functions
 - Owner is not able to blacklist an arbitrary address.
 - Owner is not able to disable trades
 - Owner is not able to limit buy/sell/transfer/wallet amounts
 - Owner is not able to mint new tokens
 - Owner initially holds 100% of the total supply
-

CONTRACT ASSESMENT

Contract	Type	Bases			
└	**Function Name**	**Visibility**	**Mutability**	**Modifiers**	
	Token	Implementation			
└	<Constructor>	Public !	●	NO !	
└	balanceOf	Public !		NO !	
└	transfer	Public !	●	NO !	
└	transferFrom	Public !	●	NO !	
└	approve	Public !	●	NO !	

Legend

Symbol	Meaning
●	Function can modify state
💰	Function is payable

STATIC ANALYSIS

```
solc-0.8.20 is not recommended for deployment
Reference: https://github.com/crytic/slither/wiki/Detector-Documentation#incorrect-versions-of-solidity

Token.constructor() (contracts/Token.sol#16-19) uses literals with too many digits:
- totalSupply = 4250000000000000 * (10 ** decimals) (contracts/Token.sol#17)
Reference: https://github.com/crytic/slither/wiki/Detector-Documentation#too-many-digits

Token.decimals (contracts/Token.sol#11) should be constant
Token.name (contracts/Token.sol#9) should be constant
Token.symbol (contracts/Token.sol#10) should be constant
Reference: https://github.com/crytic/slither/wiki/Detector-Documentation#state-variables-that-could-be-declared-constant

Token.totalSupply (contracts/Token.sol#8) should be immutable
Reference: https://github.com/crytic/slither/wiki/Detector-Documentation#state-variables-that-could-be-declared-immutable
```

Static Analysis

an static analysis of the code were performed using
slither. No issues were found

FUNCTIONAL TESTING

Router (PCS V2):

0xD99D1c33F9fC3444f8101754aBC46c52416550D1

1- Adding liquidity (passed):

<https://testnet.bscscan.com/tx/0x03876fb1c4894b5a6e252cccf771d2980e28b45af54bf53f65885f781b72d86>

2- Buying (0% tax) (passed):

<https://testnet.bscscan.com/tx/0x1da769411c0882ad67dfb6b63357e5794942765ba173992b9802b697f509c5d7>

3- Selling (0% tax) (passed):

<https://testnet.bscscan.com/tx/0xb5337ab2595785af035adc20fb8fa76eeb7ec52dbf2527a6667ba159e69b2a65>

4- Transferring 0% tax) (passed):

<https://testnet.bscscan.com/tx/0xf216cf965c2738fd6bd09fedd5b348b7fe8f4f90cdf99da441528542c1175d2d>

ABOUT AUDITACE

We specialize in providing thorough and reliable audits for Web3 projects. With a team of experienced professionals, we use cutting-edge technology and rigorous methodologies to evaluate the security and integrity of blockchain systems. We are committed to helping our clients ensure the safety and transparency of their digital assets and transactions.
