FOR

# Dragon Crystals

DATED : 12 October 23'

# AUDIT SUMMARY

---

**Project name** – Dragon Crystals

**Date:** 12 October 2023

**Scope of Audit-** Audit Ace was consulted to conduct the smart contract audit of the solidity source codes.

**Audit Status:** **Passed**

## Issues Found

Status	Critical	High	Medium	Low	Suggestion
Open	0	0	0	0	0
Acknowledged	0	0	0	0	0

# USED TOOLS

---

## Tools:

### 1- Manual Review:

A line by line code review has been performed by audit ace team.

**2- BSC Test Network:** All tests were conducted on the BSC Test network, and each test has a corresponding transaction attached to it. These tests can be found in the "Functional Tests" section of the report.

### 3- Slither :

The code has undergone static analysis using Slither.

### Testnet version:

The tests were performed using the contract deployed on the BSC Testnet, which can be found at the following address:

<https://testnet.bscscan.com/address/0xefba4aEf19340F487269A4c1af18B8116Fb0B6B3#code>

**Token Address :**

0xA323E9005c63F618C9b37356CBB0dc131c20B37A

**Name:** Dragon Crystals

**Symbol:** DRAGONC

**Decimals:** 9

**Netowrk:** BSC

**Token Type:** BEP20

**Owner:** 0xeaBcEd23C8ff47FCd66580AF7A7F6a68719C1E8a  
(at time of writing the audit)

**Deployer:** 0xeaBcEd23C8ff47FCd66580AF7A7F6a68719C1E8a

**Token Supply:** 650,000,000

**Checksum:**

666e75b39d29acabb5178c89e9848d7b41227d93

**Testnet version:**

The tests were performed using the contract deployed on the BSC Testnet, which can be found at the following address:

# TOKEN OVERVIEW

---

**buy fee:** 0-25%

**Sell fee:** 0-25%

**transfer fee:** 0-25%

---

**Fee Privilege:** Owner

---

**Ownership:** Owned

---

**Minting:** None

---

**Max Tx:** No

---

**Blacklist:** No

---

**Other Privileges:**

- Initial distribution of the tokens
  - Modifying fees
-

# AUDIT METHODOLOGY

---

The auditing process will follow a routine as special considerations by Auditace:

- Review of the specifications, sources, and instructions provided to Auditace to make sure the contract logic meets the intentions of the client without exposing the user's funds to risk.
  - Manual review of the entire codebase by our experts, which is the process of reading source code line-by-line in an attempt to identify potential vulnerabilities.
  - Specification comparison is the process of checking whether the code does what the specifications, sources, and instructions provided to Auditace describe.
  - Test coverage analysis determines whether the test cases are covering the code and how much code is exercised when we run the test cases.
  - Symbolic execution is analysing a program to determine what inputs cause each part of a program to execute.
  - Reviewing the codebase to improve maintainability, security, and control based on the established industry and academic practices.
-

# CLASSIFICATION OF RISK

## Severity

## Description

### ◆ Critical

These vulnerabilities could be exploited easily and can lead to asset loss, data loss, asset, or data manipulation. They should be fixed right away.

### ◆ High-Risk

A vulnerability that affects the desired outcome when using a contract, or provides the opportunity to use a contract in an unintended way.

### ◆ Medium-Risk

A vulnerability that could affect the desired outcome of executing the contract in a specific scenario.

### ◆ Low-Risk

A vulnerability that does not have a significant impact on possible scenarios for the use of the contract and is probably subjective.

### ◆ Gas Optimization /Suggestion

A vulnerability that has an informational character but is not affecting any of the code.

# INHERITANCE TREE

---

# POINTS TO NOTE

---

- **Owner is able to change buy/sell/transfer fees in range 0-25%**
  - Owner is not able to blacklist an arbitrary address.
  - Owner is not able to disable trades
  - Owner is not able to set max buy/sell/transfer/hold amounts
  - Owner is not able to mint new tokens
