

# Smart Contract Audit

**FOR** 

# **PEPEAI**

**DATED: 26 MAY 23'** 

## **AUDIT SUMMARY**

Project name - PEPEAI

**Date: 26** May, 2023

**Scope of Audit-** Audit Ace was consulted to conduct the smart contract audit of the solidity source codes.

**Audit Status: Passed** 

#### **Issues Found**

Status	Critical	High	Medium	Low	Suggestion
Open	0	0	0	0	0
Acknowledged	0	0	0	0	0
Resolved	0	0	0	0	0

# **USED TOOLS**

#### Tools:

- **1.Manual Review:** The code has undergone a line-by-line review by the **Ace** team.
- **2.ETH Test Network:** All tests were conducted on the ETH Test network, and each test has a corresponding transaction attached to it. These tests can be found in the "Functional Tests" section of the report.
- **3.Slither:** The code has undergone static analysis using Slither.

#### **Testnet version:**

The tests were performed using the contract deployed on the BSC Testnet, which can be found at the following address:

https://testnet.bscscan.com/token/0xb14db9bb7e58 39d41e60ceaaf921aa317ea751fe

# **Token Information**

Name: Pepe Al

Symbol: PEPEAI

Decimals: 18

Network: BSC

Token Type:BEP20

#### **Token Address:**

0x91eC9063f033f29673098f277203Aff736A260e4

Owner: --- (at time of writing the audit)

**Deployer**:0x59Fab484580e24A8f86D884a80c1741E

0a444A6e

## **Token Information**

Fees:

Buy Fees: 0%

Sell Fees: 0%

Transfer Fees: 0%

Fees Privilige: No fees

Ownership: Not owned

Minting: None

Max Tx Amount/ Max Wallet Amount: No

Blacklist: No

Other Priviliges: Initial distribution of the tokens

## **AUDIT METHODOLOGY**

The auditing process will follow a routine as special considerations by Auditace:

- Review of the specifications, sources, and instructions provided to Auditace to make sure the contract logic meets the intentions of the client without exposing the user's funds to risk.
- Manual review of the entire codebase by our experts, which is the process of reading source code line-byline in an attempt to identify potential vulnerabilities.
- Specification comparison is the process of checking whether the code does what the specifications, sources, and instructions provided to Auditace describe.
- Test coverage analysis determines whether the test cases are covering the code and how much code isexercised when we run the test cases.
- Symbolic execution is analysing a program to determine what inputs cause each part of a program to execute.
- Reviewing the codebase to improve maintainability, security, and control based on the established industry and academic practices.

## **VULNERABILITY CHECKLIST**

## **CLASSIFICATION OF RISK**

#### Severity

- Critical
- High-Risk
- Medium-Risk
- Low-Risk
- Gas Optimization/Suggestion

### **Description**

These vulnerabilities could be exploited easily and can lead to asset loss, data loss, asset, or data manipulation. They should be fixed right away.

A vulnerability that affects the desired outcome when using a contract, or provides the opportunity to use a contract in an unintended way.

A vulnerability that could affect the desired outcome of executing the contract in a specific scenario.

A vulnerability that does not have a significant impact on possible scenarios for the use of the contract and is probably subjective.

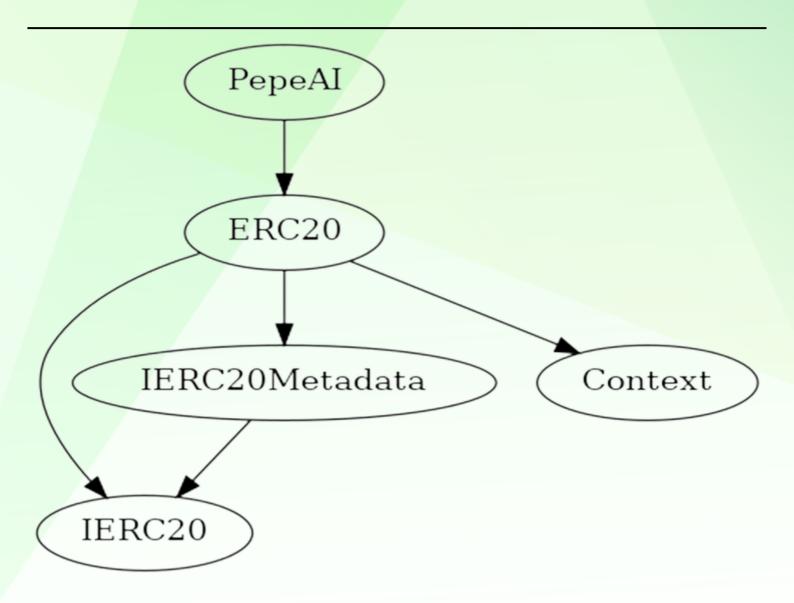

A vulnerability that has an informational character but is not affecting any of the code.

## **Findings**

Severity	Found
◆ Critical	0
◆ High-Risk	0
◆ Medium-Risk	0
♦ Low-Risk	0
<ul><li>Gas Optimization /</li><li>Suggestions</li></ul>	0

## **INHERITANCE TREE**

## **POINTS TO NOTE**

- Fees are 0 (static)
- Owner is not able to blacklist an arbitrary address.
- Owner is not able to disable trades
- Owner is not able to limit buy/sell/transfer/wallet amounts
- Owner is not able to mint new tokens

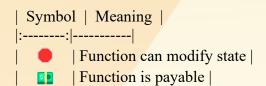

## **CONTRACT ASSESMENT**

```
Contract |
               Type
       **Function Name** | **Visibility** | **Mutability** | **Modifiers** |
| **IERC20** | Interface | |||
 L | totalSupply | External | NO | |
L | balanceOf | External | | NO | |
 L | transfer | External | | NO | |
L | allowance | External | | NO | |
 | approve | External | | | NO | |
 **IERC20Metadata** | Interface | IERC20 |||
 L | name | External | | NO | |
 L | symbol | External | | NO | |
| L | decimals | External | | NO | |
| **Context** | Implementation | |||
| L | msgSender | Internal 🔒 | | |
 L | msgData | Internal 🔒 | | |
| **ERC20** | Implementation | Context, IERC20, IERC20Metadata || |
 L | <Constructor> | Public ! | | NO! |
 L | name | Public | | | NO | |
 L | symbol | Public | | NO | |
 L | decimals | Public | | | NO |
 L | totalSupply | Public | | NO | |
 L | balanceOf | Public | | NO | |
 L | transfer | Public | | | NO | |
 L | allowance | Public | | | NO | |
 L | approve | Public | | | NO |
 L | transferFrom | Public | | | NO | |
 L | increaseAllowance | Public | | | NO | |
 L | decreaseAllowance | Public | | | NO | |
 └ | transfer | Internal 🔒 | 🛑 | |
 └ | mint | Internal 🔒 | 🛑 | |
 └ | burn | Internal 🔓 | 🛑 | |
| L | approve | Internal 🔒 | 🛑 | |
 └ | beforeTokenTransfer | Internal 🔒 | ● | |
 └ | afterTokenTransfer | Internal 🔒 | ● | |
| **PepeAI** | Implementation | ERC20 |||
```

## **CONTRACT ASSESMENT**

### Legend

## STATIC ANALYSIS

Context.\_msgData() (contracts/Token.sol#53-56) is never used and should be removed ERC20.\_burn(address,uint256) (contracts/Token.sol#205-220) is never used and should be removed Reference: https://github.com/crytic/slither/wiki/Detector-Documentation#dead-code

Pragma version^0.8.17 (contracts/Token.sol#7) necessitates a version too recent to be trusted. Consider deploying with 0.6.12/0.7.6/0.8.16 solc-0.8.20 is not recommended for deployment Reference: https://github.com/crytic/slither/wiki/Detector-Documentation#incorrect-versions-of-solidity

PepeAI.constructor() (contracts/Token.sol#248-250) uses literals with too many digits: - \_mint(msg.sender,420\_690000000000 \* (10 \*\* 18)) (contracts/Token.sol#249) Reference: https://github.com/crytic/slither/wiki/Detector-Documentation#too-many-digits

## **Static Analysis**

an static analysis of the code were performed using slither. No issues were found

# **FUNCTIONAL TESTING**

#### Router (PCS V2):

0xD99D1c33F9fC3444f8101754aBC46c52416550D1

#### 1- Adding liquidity (passed):

https://testnet.bscscan.com/tx/0xb7a41b65b872212df557ce4ea51 ccc1e1a24ea2d76768c74372ec4c1e350948b21

#### 2- Buying (0% tax) (passed):

https://testnet.bscscan.com/tx/0x4bab271c36ebc88cc4f11eae923fd29d5f1a3c20c3bcc0708b010ec59fc5c141

#### 3- Selling (0% tax) (passed):

https://testnet.bscscan.com/tx/0x3b59a896e484321aea695f4561 5b66d74369183b3c1e69029a5dbb8db4db2666

#### 4- Transferring 0% tax) (passed):

https://testnet.bscscan.com/tx/0x78dc2b679cb28768c1bcebc2dbf3c537053335eaa2cf88eb3813b5e3fe86d0c9

# **ABOUT AUDITACE**

We specializes in providing thorough and reliable audits for Web3 projects. With a team of experienced professionals, we use cutting-edge technology and rigorous methodologies to evaluate the security and integrity of blockchain systems. We are committed to helping our clients ensure the safety and transparency of their digital assets and transactions.
