

Smart Contract Audit

FOR

CYB

DATED: 3 June 23'

AUDIT SUMMARY

Project name - CYB

Date: 3 June, 2023

Scope of Audit- Audit Ace was consulted to conduct the smart contract audit of the solidity source codes.

Audit Status: Passed

Issues Found

Status	Critical	High	Medium	Low	Suggestion
Open	0	0	0	0	0
Acknowledged	0	0	0	0	0
Resolved	0	0	0	0	0

USED TOOLS

Tools:

1- Manual Review:

A line by line code review has been performed by audit ace team.

2- BSC Test Network: All tests were conducted on the BSC Test network, and each test has a corresponding transaction attached to it. These tests can be found in the "Functional Tests" section of the report.

3-Slither:

The code has undergone static analysis using Slither.

Testnet version:

The tests were performed using the contract deployed on the BSC Testnet, which can be found at the following address:

https://testnet.bscscan.com/token/0xe2a1534ed0fb154 2d41f66472be349fb649051fe

Token Information

Token Name: Cybros

Token Symbol: CYB

Decimals: 18

Token Supply: 1,000,000,000

Token Address:

0x4452abC3f857f27A3c40726EF37693DD3678f3e1

Checksum:

80763c5361ccbca4d909338e8b6b7a1af2ec9852

Owner:

0x9E56b44A13CcC579b7939C0b29CAa4B67FaB70f6 (at time of writing the audit)

Deployer:

0x9E56b44A13CcC579b7939C0b29CAa4B67FaB70f6

TOKEN OVERVIEW

Fees:

Buy Fees: 0%

Sell Fees: 0%

Transfer Fees: 0%

Fees Privilege: No fees

Ownership: Not Owned

Minting: None

Max Tx Amount/ Max Wallet Amount: No

Blacklist: No

Other Privileges: - Initial distribution of the tokens

AUDIT METHODOLOGY

The auditing process will follow a routine as special considerations by Auditace:

- Review of the specifications, sources, and instructions provided to Auditace to make sure the contract logic meets the intentions of the client without exposing the user's funds to risk.
- Manual review of the entire codebase by our experts, which is the process of reading source code line-byline in an attempt to identify potential vulnerabilities.
- Specification comparison is the process of checking whether the code does what the specifications, sources, and instructions provided to Auditace describe.
- Test coverage analysis determines whether the test cases are covering the code and how much code isexercised when we run the test cases.
- Symbolic execution is analysing a program to determine what inputs cause each part of a program to execute.
- Reviewing the codebase to improve maintainability, security, and control based on the established industry and academic practices.

VULNERABILITY CHECKLIST

CLASSIFICATION OF RISK

Severity

- Critical
- High-Risk
- Medium-Risk
- Low-Risk
- Gas Optimization/Suggestion

Description

These vulnerabilities could be exploited easily and can lead to asset loss, data loss, asset, or data manipulation. They should be fixed right away.

A vulnerability that affects the desired outcome when using a contract, or provides the opportunity to use a contract in an unintended way.

A vulnerability that could affect the desired outcome of executing the contract in a specific scenario.

A vulnerability that does not have a significant impact on possible scenarios for the use of the contract and is probably subjective.

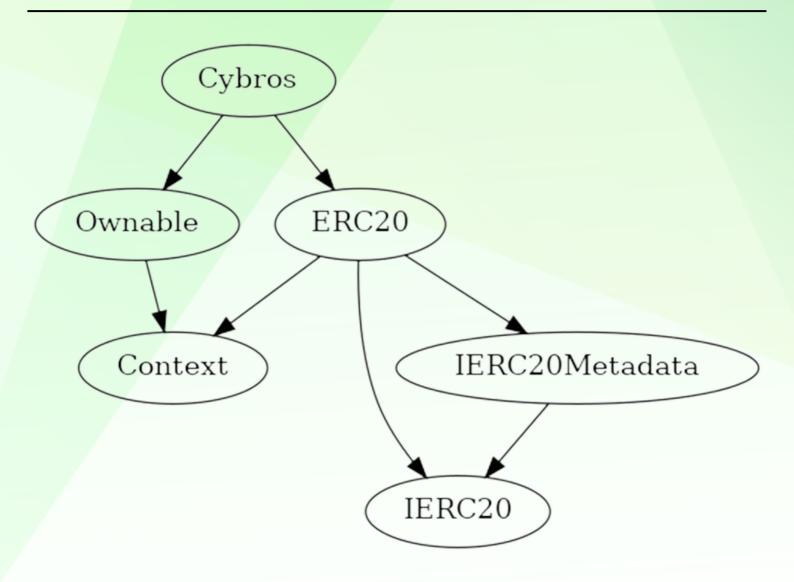

A vulnerability that has an informational character but is not affecting any of the code.

Findings

Severity	Found
◆ Critical	0
◆ High-Risk	0
◆ Medium-Risk	0
♦ Low-Risk	0
Gas Optimization /Suggestions	0

INHERITANCE TREE

POINTS TO NOTE

- Fees are 0 (static)
- Owner is not able to blacklist an arbitrary address.
- Owner is not able to disable trades
- Owner is not able to limit buy/sell/transfer/wallet amounts
- Owner is not able to mint new tokens

CONTRACT ASSESMENT

```
Contract |
              Type
       **Function Name** | **Visibility** | **Mutability** | **Modifiers** |
**Context** | Implementation | |||
 L | msgSender | Internal | | | |
 L | msgData | Internal | | | |
**Ownable** | Implementation | Context ||
L | < Constructor > | Public | | | NO | |
 lowner | Public | | NO | |
 checkOwner | Internal 🔒 | |
 L | renounceOwnership | Public | | onlyOwner |
 L | transferOwnership | Internal 🔒 | 🛑 | |
**IERC20** | Interface | |||
 L | totalSupply | External | | NO | |
 L | balanceOf | External | | NO | |
 L | transfer | External | | | NO | |
 L | allowance | External | | NO | |
 L | approve | External | | NO | |
 L | transferFrom | External | | | NO | |
**IERC20Metadata** | Interface | IERC20 |||
L | name | External | | NO | |
 L | symbol | External | | NO | |
 L | decimals | External | | NO | |
**ERC20** | Implementation | Context, IERC20, IERC20Metadata |||
 L | <Constructor> | Public | | | NO | |
L | name | Public | | NO | |
 L | symbol | Public | | NO | |
L | decimals | Public | | NO | |
 L | totalSupply | Public | | NO | |
 L | balanceOf | Public | | NO | |
 L | transfer | Public | | | NO | |
 L | allowance | Public | | NO | |
 L | approve | Public | | | NO | |
 L | transferFrom | Public | | NO |
 L | decreaseAllowance | Public | | NO | |
 └ | transfer | Internal 🔒 | ● | |
```

CONTRACT ASSESMENT

STATIC ANALYSIS

Context._msgData() (contracts/Token.sol#12-14) is never used and should be removed ERC20._burn(address,uint256) (contracts/Token.sol#376-391) is never used and should be removed Reference: https://github.com/crytic/slither/wiki/Detector-Documentation#dead-code

Pragma version^0.8.17 (contracts/Token.sol#5) necessitates a version too recent to be trusted. Consider deploying with 0.6.12/0.7.6/0.8.16 solc-0.8.20 is not recommended for deployment
Reference: https://github.com/crytic/slither/wiki/Detector-Documentation#incorrect-versions-of-solidity

Cybros.constructor() (contracts/Token.sol#571-573) uses literals with too many digits:

Cybros.constructor() (contracts/Token.sol#571-573) uses literals with too many digits:
- _mint(msg.sender,10000000000 * 10 ** decimals()) (contracts/Token.sol#572)
Reference: https://github.com/crytic/slither/wiki/Detector-Documentation#too-many-digits

Result => A static analysis of contract's source code has been performed using slither,

No major issues were found in the output

FUNCTIONAL TESTING

Router (PCS V2):

0xD99D1c33F9fC3444f8101754aBC46c52416550D1

1- Adding liquidity (passed):

https://testnet.bscscan.com/tx/0x6a4c8f470d1a125e3474169f3b322d8 6e621bc4b6f8d67337e06e5a0936bcb34

2- Buying (0% tax) (passed):

https://testnet.bscscan.com/tx/0x70e44f4096a128ad9b58f9b3dc34a8 00885b3cde9905b36912db3bc28e50eaaa

3- Selling (0% tax) (passed):

https://testnet.bscscan.com/tx/0x5a615b038087152c0d83ae6b84fde1 40dac1f9b057370f25ae70f83965fd957b

4- Transferring 0% tax) (passed):

ABOUT AUDITACE

We specializes in providing thorough and reliable audits for Web3 projects. With a team of experienced professionals, we use cutting-edge technology and rigorous methodologies to evaluate the security and integrity of blockchain systems. We are committed to helping our clients ensure the safety and transparency of their digital assets and transactions.
