

Smart Contract Audit

FOR

ReBaseChain

DATED: 30 August 23'

AUDIT SUMMARY

Project name - ReBaseChain

Date: 30 August 2023

Scope of Audit- Audit Ace was consulted to conduct the smart contract audit of the solidity source codes.

Audit Status: Passed

Issues Found

Status	Critical	High	Medium	Low	Suggestion
Open	0	0	0	0	0
Acknowledged	0	0	0	0	0
Resolved	0	0	0	0	0

USED TOOLS

Tools:

1- Manual Review:

A line by line code review has been performed by audit ace team.

2- BSC Test Network: All tests were conducted on the BSC Test network, and each test has a corresponding transaction attached to it. These tests can be found in the "Functional Tests" section of the report.

3-Slither:

The code has undergone static analysis using Slither.

Testnet version:

The tests were performed using the contract deployed on the BSC Testnet, which can be found at the following address:

https://testnet.bscscan.com/token/0x2843F9032EaD72 C1AFae02b926Faf128993ac3c6

Token Information

Token Address:

0xD6090942B8AB3De00474A9cC27F18BBC7221F598

Name: ReBaseChain

Symbol: BASE

Decimals: 18

Network: Ethereum

Token Type: ERC20

Owner: 0x6db2e6AC77591e464Eb68ba2039b18CD3C85076b

(at time of writing the audit)

Deployer:

0x6db2e6AC77591e464Eb68ba2039b18CD3C85076b

Token Supply: 1,000,000,000

Checksum:

0ac8b43689586ec2f0b310755151bdcd87dba981

Testnet version:

The tests were performed using the contract deployed on the BSC Testnet, which can be found at the following address:

https://testnet.bscscan.com/token/0x2843F9032EaD72C1AFae02b926Faf128993ac3c6

TOKEN OVERVIEW

buy fee: 0%	
Sell fee: 0%	
transfer fee: 0%	
Fee Privilege: Static fees	
Ownership: Owned	
Minting: None	
Max Tx: No	
Blacklist: No	
Other Privileges:	
- Initial distribution of the tokens	

AUDIT METHODOLOGY

The auditing process will follow a routine as special considerations by Auditace:

- Review of the specifications, sources, and instructions provided to Auditace to make sure the contract logic meets the intentions of the client without exposing the user's funds to risk.
- Manual review of the entire codebase by our experts, which is the process of reading source code line-byline in an attempt to identify potential vulnerabilities.
- Specification comparison is the process of checking whether the code does what the specifications, sources, and instructions provided to Auditace describe.
- Test coverage analysis determines whether the test cases are covering the code and how much code isexercised when we run the test cases.
- Symbolic execution is analysing a program to determine what inputs cause each part of a program to execute.
- Reviewing the codebase to improve maintainability, security, and control based on the established industry and academic practices.

VULNERABILITY CHECKLIST

CLASSIFICATION OF RISK

Severity

- Critical
- High-Risk
- Medium-Risk
- Low-Risk
- Gas Optimization/Suggestion

Description

These vulnerabilities could be exploited easily and can lead to asset loss, data loss, asset, or data manipulation. They should be fixed right away.

A vulnerability that affects the desired outcome when using a contract, or provides the opportunity to use a contract in an unintended way.

A vulnerability that could affect the desired outcome of executing the contract in a specific scenario.

A vulnerability that does not have a significant impact on possible scenarios for the use of the contract and is probably subjective.

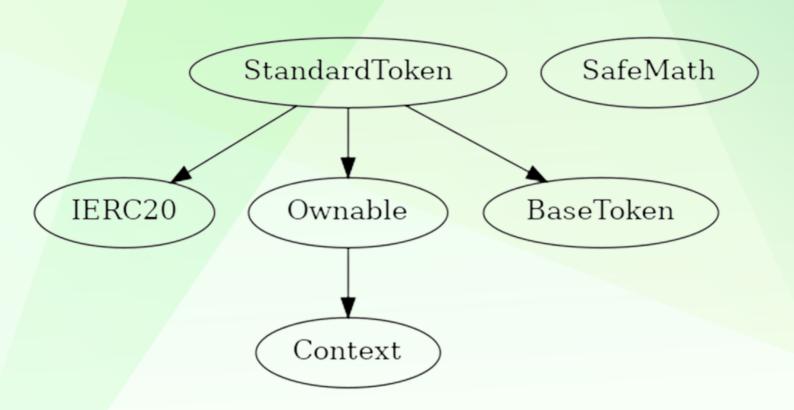

A vulnerability that has an informational character but is not affecting any of the code.

Findings

Severity	Found
◆ Critical	0
◆ High-Risk	0
◆ Medium-Risk	0
♦ Low-Risk	0
Gas Optimization /Suggestions	0

INHERITANCE TREE

POINTS TO NOTE

- Fees are 0 (static)
- Owner is not able to blacklist an arbitrary address.
- Owner is not able to disable trades
- Owner is not able to limit buy/sell/transfer/wallet amounts
- Owner is not able to mint new tokens

STATIC ANALYSIS

```
StandardToken.allowance(address,address).owner (contracts/Token.sol#591) shadows:
- Ownable.owner() (contracts/Token.sol#199-161) (function)
StandardToken.approve(address,address.uint250).owner (contracts/Token.sol#195-161) (function)
Reference: https://glthub.com/crytic/slther/wiki/Detector-Documentation#local-variable-shadowing

Context._msgData() (contracts/Token.sol#19-120) is never used and should be removed
SafeMsth.div(uint256, uint256) (contracts/Token.sol#39-351) is never used and should be removed
SafeMsth.div(uint256, uint256) (contracts/Token.sol#39-351) is never used and should be removed
SafeMsth.div(uint256, uint256) (contracts/Token.sol#39-351) is never used and should be removed
SafeMsth.mod(uint256, uint256) (contracts/Token.sol#39-367) is never used and should be removed
SafeMsth.mod(uint256, uint256) (contracts/Token.sol#39-367) is never used and should be removed
SafeMsth.mod(uint256, uint256) (contracts/Token.sol#39-347) is never used and should be removed
SafeMsth.sul(uint256, uint256) (contracts/Token.sol#39-347) is never used and should be removed
SafeMsth.tryNdd(uint256, uint256) (contracts/Token.sol#39-347) is never used and should be removed
SafeMsth.tryNdd(uint256, uint256) (contracts/Token.sol#39-347) is never used and should be removed
SafeMsth.tryNdd(uint256, uint256) (contracts/Token.sol#39-379) is never used and should be removed
SafeMsth.tryNdd(uint256, uint256) (contracts/Token.sol#39-379) is never used and should be removed
SafeMsth.tryNdd(uint256, uint256) (contracts/Token.sol#39-379) is never used and should be removed
SafeMsth.tryNdd(uint256, uint256) (contracts/Token.sol#39-739) is never used and should be removed
SafeMsth.tryNdd(uint256, uint256) (contracts/Token.sol#39-739) is never used and should be removed
SafeMsth.trySub(uint256, uint256) (contracts/Token.sol#39-739) is never used and should be removed
SafeMsth.trySub(uint256, uint256) (contracts/Token.sol#39-739) is never used and should be removed
SafeMsth.trySub(uint256, uint256) (contracts/Token.sol#39-739) is
```

Result => A static analysis of contract's source code has been performed using slither,

No major issues were found in the output

CONTRACT ASSESMENT

```
| Contract | Type | Bases |
                          Ι
| **Function Name** | **Visibility** | **Mutability** | **Modifiers** |

ABOUT AUDITACE

We specializes in providing thorough and reliable audits for Web3 projects. With a team of experienced professionals, we use cutting-edge technology and rigorous methodologies to evaluate the security and integrity of blockchain systems. We are committed to helping our clients ensure the safety and transparency of their digital assets and transactions.
