

# Smart Contract Audit

**FOR** 

**MEME 2.0** 

DATED: 28 October 23'

### MANUAL TESTING

**Centralization** - **Enabling Trades** 

Severity: High

function: EnableTrading

Status: Open

#### Overview:

The EnableTrading function permits only the contract owner to activate trading capabilities. Until this function is executed, no investors can buy, sell, or transfer their tokens. This places a high degree of control and centralization in the hands of the contract owner.

```
function EnableTrading() external onlyOwner {
    require(!tradingEnabled, "Cannot re-enable trading");
    tradingEnabled = true;
    providingLiquidity = true;
    genesis_block = block.number;
}
```

#### Suggestion

To reduce centralization and potential manipulation, consider one of the following approaches:

- 1. Automatically enable trading after a specified condition, such as the completion of a presale, is met.
- 2.If manual activation is still desired, consider transferring the ownership of the contract to a trustworthy, third-party entity like a certified "PinkSale Safu" developer. This can provide investors with more confidence in the eventual activation of trading capabilities, mitigating concerns of potential bad faith actions by the original owner

## **AUDIT SUMMARY**

Project name - MEME 2.0

Date: 28 October 2023

**Scope of Audit-** Audit Ace was consulted to conduct the smart contract audit of the solidity source codes.

**Audit Status: Passed with High Risk** 

### **Issues Found**

Status	Critical	High	Medium	Low	Suggestion
Open	0	1	1	0	0
Acknowledged	0	0	0	0	0
Resolved	0	0	0	0	0

## **USED TOOLS**

### Tools:

### 1- Manual Review:

A line by line code review has been performed by audit ace team.

2- BSC Test Network: All tests were conducted on the BSC Test network, and each test has a corresponding transaction attached to it. These tests can be found in the "Functional Tests" section of the report.

### 3-Slither:

The code has undergone static analysis using Slither.

### **Testnet version:**

The tests were performed using the contract deployed on the BSC Testnet, which can be found at the following address:

https://testnet.bscscan.com/address/0x72F971190F47 Da63bd5588c18031111D4B24aF39#code

## **Token Information**

### **Token Address:**

0xFcCC83409f030F0700261f2A3efEA8f743090D2e

Name: MEME 2.0

Symbol: MEME 2.0

Decimals: 18

**Network:** Binance smart chain

Token Type: BEP20

Owner: 0x0302Bdf0E753E732DbB1fB93f698D12138534A04

Deployer: 0x0302Bdf0E753E732DbB1fB93f698D12138534A04

Token Supply: 1,000,000

### Checksum:

af747e29e250fa2181f56bced993ee804a62665c

### **Testnet version:**

The tests were performed using the contract deployed on the BSC Testnet, which can be found at the following address: https://testnet.bscscan.com/address/0x72F971190F47Da63bd5588c1803111D4B24aF39#code

## TOKEN OVERVIEW

buy fee: 0-5%

**Sell fee: 0-12%** 

transfer fee: 0-5%

Fee Privilege: Owner

Ownership: Owned

Minting: None

Max Tx: No

Blacklist: No

### Other Privileges:

- Initial distribution of the tokens
- Modifying fees
- Enabling trades

## **AUDIT METHODOLOGY**

The auditing process will follow a routine as special considerations by Auditace:

- Review of the specifications, sources, and instructions provided to Auditace to make sure the contract logic meets the intentions of the client without exposing the user's funds to risk.
- Manual review of the entire codebase by our experts, which is the process of reading source code line-byline in an attempt to identify potential vulnerabilities.
- Specification comparison is the process of checking whether the code does what the specifications, sources, and instructions provided to Auditace describe.
- Test coverage analysis determines whether the test cases are covering the code and how much code isexercised when we run the test cases.
- Symbolic execution is analysing a program to determine what inputs cause each part of a program to execute.
- Reviewing the codebase to improve maintainability, security, and control based on the established industry and academic practices.

## **VULNERABILITY CHECKLIST**

## **CLASSIFICATION OF RISK**

### Severity

- Critical
- High-Risk
- Medium-Risk
- Low-Risk
- Gas Optimization/Suggestion

### **Description**

These vulnerabilities could be exploited easily and can lead to asset loss, data loss, asset, or data manipulation. They should be fixed right away.

A vulnerability that affects the desired outcome when using a contract, or provides the opportunity to use a contract in an unintended way.

A vulnerability that could affect the desired outcome of executing the contract in a specific scenario.

A vulnerability that does not have a significant impact on possible scenarios for the use of the contract and is probably subjective.

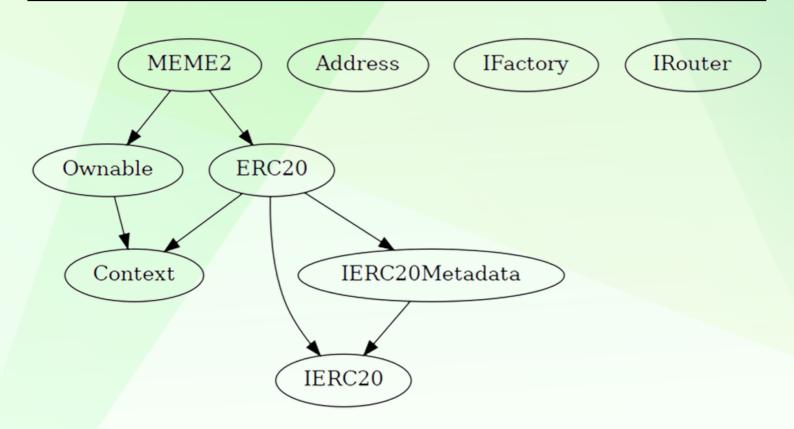

A vulnerability that has an informational character but is not affecting any of the code.

### **Findings**

Severity	Found
<b>♦</b> Critical	0
♦ High-Risk	1
◆ Medium-Risk	1
♦ Low-Risk	0
<ul><li>Gas Optimization /</li><li>Suggestions</li></ul>	0

### **INHERITANCE TREE**

### **POINTS TO NOTE**

- Owner is able to adjust buy/transfer fees within 0-5%
- Owner is able to adjust sell fees within 0 12%
- Owner is not able to blacklist an arbitrary wallet
- Owner is not able to disable trades
- Owner is not able to mint new tokens
- Owner is not able to set maximum wallet and maximum buy/sell/transfer limits
- Owner must enable trades manually

### STATIC ANALYSIS

```

## **FUNCTIONAL TESTING**

#### 1- Adding liquidity (passed):

https://testnet.bscscan.com/tx/0x610a92bab9e43c07215d271ac4cd1fb53964eb6eb5 895fad4290cc3a0eae00a6

#### 2- Buying when excluded (0% tax) (passed):

https://testnet.bscscan.com/tx/0x4330ccfb839ea32759649c44a7227d549d94096fe055ad37fa49ccb63ad6d3f6

#### 3- Selling when excluded (0% tax) (passed):

https://testnet.bscscan.com/tx/0xf9901020bdbc2d80da9605b898a0eade3546aabe9 6e7886dbe81225d7de46d2f

### 4- Transferring when excluded from fees (0% tax) (passed):

https://testnet.bscscan.com/tx/0xc96c49848bf4e3fbdca632bc65df4b217fe2b4096 a689946f2c904ae3988374f

#### 5- Buying when not excluded from fees (tax 0-5%) (passed):

https://testnet.bscscan.com/tx/0x7bcee2e9575efe434529469de6dd5ef98249aa96 533c955da47b17956c08cd74

#### 6- Selling when not excluded from fees (tax 0-12%) (passed):

https://testnet.bscscan.com/tx/0xe9bf510abd780f15447b3d457aabadeab9c818e85 2270469c02c890c97c7001c

### 7- Transferring when not excluded from fees (0-5% tax ) (passed):

https://testnet.bscscan.com/tx/0x6004c08b52be2a1c6367f8187992a83fd89f36d94 4e778b2e83e594afb98097d

#### 8- Internal swap (BNB set to dev wallet + Auto-liquidity) (passed):

https://testnet.bscscan.com/tx/0xe9bf510abd780f15447b3d457aabadeab9c818e85 2270469c02c890c97c7001c

### MANUAL TESTING

**Centralization** - **Enabling Trades** 

Severity: High

function: EnableTrading

Status: Open

#### Overview:

The EnableTrading function permits only the contract owner to activate trading capabilities. Until this function is executed, no investors can buy, sell, or transfer their tokens. This places a high degree of control and centralization in the hands of the contract owner.

```
function EnableTrading() external onlyOwner {
    require(!tradingEnabled, "Cannot re-enable trading");
    tradingEnabled = true;
    providingLiquidity = true;
    genesis_block = block.number;
}
```

#### Suggestion

To reduce centralization and potential manipulation, consider one of the following approaches:

- 1. Automatically enable trading after a specified condition, such as the completion of a presale, is met.
- 2.If manual activation is still desired, consider transferring the ownership of the contract to a trustworthy, third-party entity like a certified "PinkSale Safu" developer. This can provide investors with more confidence in the eventual activation of trading capabilities, mitigating concerns of potential bad faith actions by the original owner

### MANUAL TESTING

Logical - Updating swap threshold

**Severity: Medium** 

function: updateLiquidityThreshold

Status: Open

#### Overview:

updateLiquidityThreshold requires new swap threshold to be less than 1e7 which is equal to 10x of total supply while error message indicates that new swap threshold amount must be less than 1% of total supply (1e5)

```
function updateLiquidityTreshhold(uint256 new_amount) external onlyOwner
{
    require(
        new_amount <= 1e7,
        "Swap threshold amount should be lower or equal to 1% of tokens"
    );
    tokenLiquidityThreshold = new_amount * 10 ** decimals();
}</pre>
```

#### Suggestion

Change condition to be compatible with the error message:

```
function updateLiquidityTreshhold(uint256 new_amount) external onlyOwner
{
    require(
        new_amount <= 1e5,
        "Swap threshold amount should be lower or equal to 1% of tokens"
    );
    tokenLiquidityThreshold = new_amount * 10 ** decimals();
}</pre>
```

## **ABOUT AUDITACE**

We specializes in providing thorough and reliable audits for Web3 projects. With a team of experienced professionals, we use cutting-edge technology and rigorous methodologies to evaluate the security and integrity of blockchain systems. We are committed to helping our clients ensure the safety and transparency of their digital assets and transactions.
