

Smart Contract Audit

FOR

PEPEDRIP

DATED: 24 May 23'

AUDIT SUMMARY

Project name - PEPEDRIP

Date: 24 May, 2023

Scope of Audit- Audit Ace was consulted to conduct the smart contract audit of the solidity source codes.

Audit Status: Passed

USED TOOLS

Tools:

1- Manual Review:

a line by line code review has been performed by audit ace team.

2- BSC Test Network:

all tests were done on BSC Test network, each test has its transaction has attached to it.

3- Slither: Static Analysis

Testnet Link: all tests were done using this contract, tests are done on BSC Testnet

TOKEN OVERVIEW

Fees:

Buy Fees: 8%

Sell Fees: 8 %

Transfer Fees: 8%

Fees Privilige: static

Ownership: 0xD3058a9bbE3A17f488b05d48239c2151023fDE42

Minting: No mint function

Max Tx Amount/ Max Wallet Amount: none

Blacklist: No

Other Priviliges: - initial distribution of the tokens

- Enabling trades (disabled by default)
- Excluding wallets from fees
- Including wallets in fees

AUDIT METHODOLOGY

The auditing process will follow a routine as special considerations by Auditace:

- Review of the specifications, sources, and instructions provided to Auditace to make sure the contract logic meets the intentions of the client without exposing the user's funds to risk.
- Manual review of the entire codebase by our experts, which is the process of reading source code line-byline in an attempt to identify potential vulnerabilities.
- Specification comparison is the process of checking whether the code does what the specifications, sources, and instructions provided to Auditace describe.
- Test coverage analysis determines whether the test cases are covering the code and how much code isexercised when we run the test cases.
- Symbolic execution is analysing a program to determine what inputs cause each part of a program to execute.
- Reviewing the codebase to improve maintainability, security, and control based on the established industry and academic practices.

Description

These vulnerabilities could be exploited easily and can lead to asset loss, data loss, asset, or data manipulation. They should be fixed right away.

A vulnerability that affects the desired outcome when using a contract, or provides the opportunity to use a contract in an unintended way.

A vulnerability that could affect the desired outcome of executing the contract in a specific scenario.

A vulnerability that does not have a significant impact on possible scenarios for the use of the contract and is probably subjective.

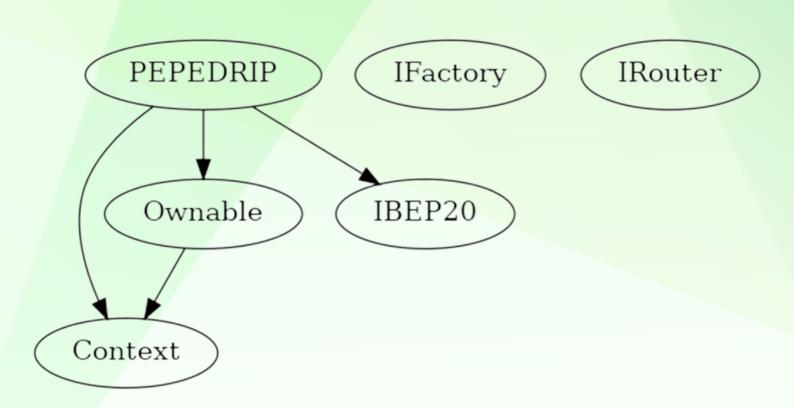

A vulnerability that has an informational character but is not affecting any of the code.

INHERITANCE TREE

POINTS TO NOTE

- Owner is not able to change buy/sell fees at current version of the contract (8%)
- Owner is not able to set max buy/sell/transfer/hold amount
- · Owner is not able to blacklist an arbitrary wallet
- Owner is not able able to limit buys/transfers/sells by a max amount as limit
- Owner is not able to mint new tokens
- Owner must enable trades manually for holders

ISSUES FOUND

Logical – Owner must enable trades

Severity: Medium

function: enableTrading Status: Not Resolved

Overview:

Owner must enable trades for investors manually. If trades remain disabled, no one would be able to buy/sell/transfer tokens (except owner)

```
function enableTrading() external onlyOwner {
  require(!isTradingEnabled, "Trading already enabled");
  isTradingEnabled = true;
  emit _tradingEnabled();
}
```

Suggestion

To mitigate this issue, there are several options:

- Enable trades before starting the presale
- Transfer ownership of the contract to a trust 3rd party like pinksale (safu dev) in order to guarantee that trades will be enabled
- create a mechanism which will enable trades automatically after a preiod of time
